

Agent Reference Cards

Amazon Connect
Contact Control Panel

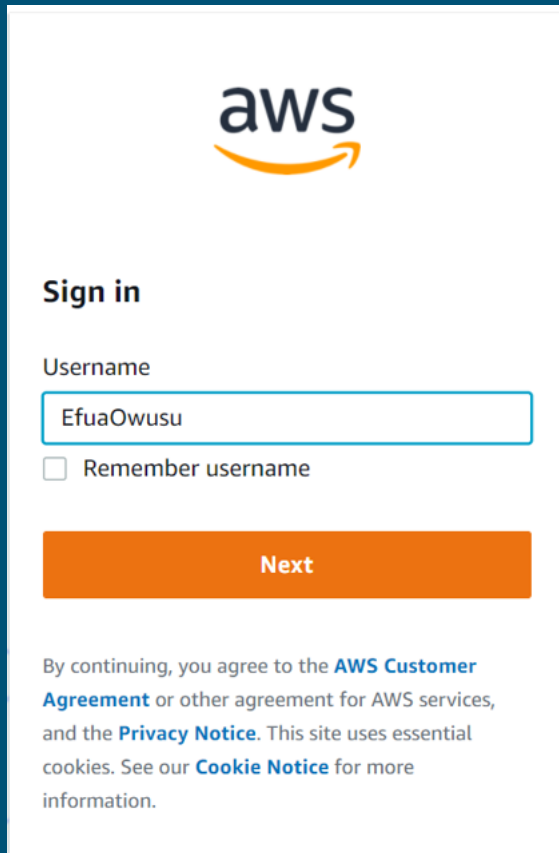

Accessing URL

- Get the login URL from the organization's Administrator.
- Launch the desktop application.

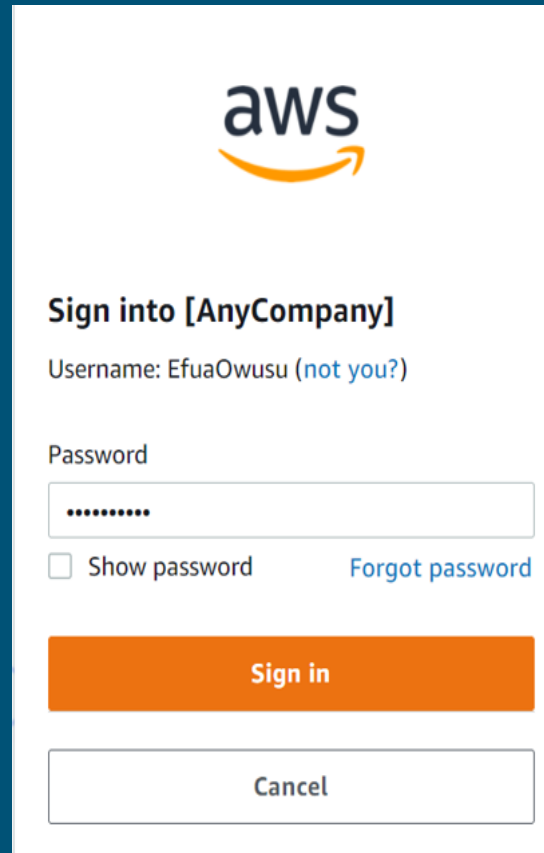

Log in with SAML 2.0

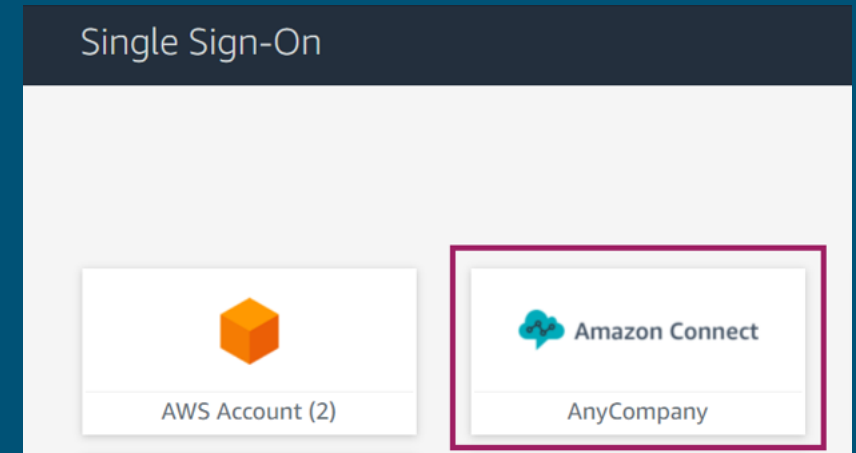

The screenshot shows the AWS 'Sign in' page. At the top is the AWS logo. Below it, the text 'Sign in' is displayed. There is a 'Username' label followed by a text input field containing 'EfuaOwusu'. Below the input field is a checkbox labeled 'Remember username'. An orange 'Next' button is positioned below the checkbox. At the bottom, there is a line of text: 'By continuing, you agree to the [AWS Customer Agreement](#) or other agreement for AWS services, and the [Privacy Notice](#). This site uses essential cookies. See our [Cookie Notice](#) for more information.'

1. Enter Username.
2. Choose Next button.

The screenshot shows the 'Sign into [AnyCompany]' page. At the top is the AWS logo. Below it, the text 'Sign into [AnyCompany]' is displayed. There is a 'Username' label followed by a text input field containing 'EfuaOwusu (not you?)'. Below the input field is a checkbox labeled 'Remember username'. A 'Password' label is followed by a password input field with masked characters. Below the password field are two links: 'Show password' and 'Forgot password'. An orange 'Sign in' button is positioned below the password field. A 'Cancel' button is at the bottom.

1. Enter Password.
2. Choose Sign in button.

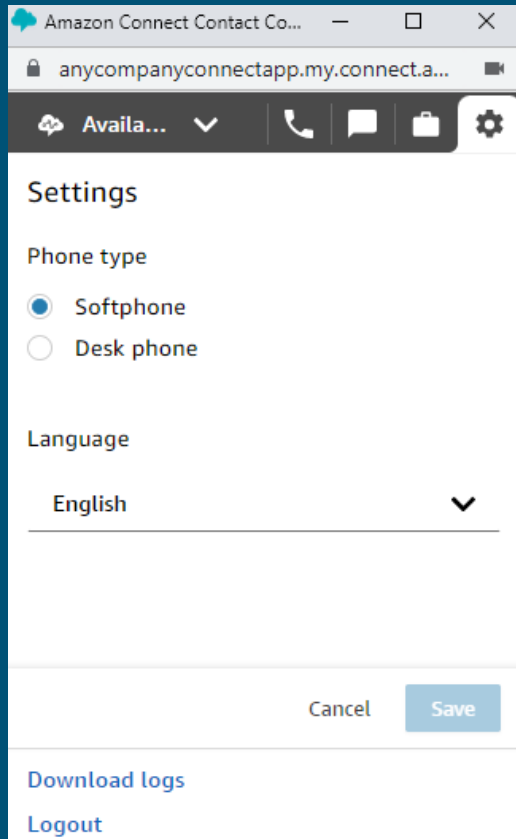

The screenshot shows the 'Single Sign-On' page. At the top is a dark header with the text 'Single Sign-On'. Below the header, there are two application cards. The first card has an orange cube icon and the text 'AWS Account (2)'. The second card has a blue speech bubble icon with a white 'A' and the text 'Amazon Connect' and 'AnyCompany'. The second card is highlighted with a red border.

1. Select Amazon Connect application.

Mozilla Firefox	Latest three versions	Open Firefox. On the menu, choose the Help icon and then choose About Firefox . The version number is listed underneath the Firefox name.

Common Contact Control Panel Issues

Issue	Description	How to test
One-way audio	When the agent can't hear the caller or the caller can't hear the agent.	Amazon Connect Endpoint Test Utility
Audio is choppy, cutting out, echo, reverb, or other signal noise	Audio that is disrupted or corrupted.	Amazon Connect Endpoint Test Utility
Wobble	Wobble is side effect of the audio trying to combat latency or jittering. It sounds like the audio is slowing down or speeding up.	Amazon Connect Endpoint Test Utility
Humming in agents outgoing audio	If your customers notice a humming sound in your outgoing audio there may be a discrepancy with your headset.	To test your headsets quality follow the steps provided in this guide, Humming sound in headset .

Additional Support

Issue	Description
CCP doesn't initialize/connect	Most commonly caused by missing port/IP allow list entries, not allowing the browser microphone access, or not answering your external devices.
Periodic connection errors	Most commonly caused by network contention or competition for resources on the same network.
Missed calls, state change delays, and CCP unresponsive	Most commonly caused by network contention or competition for resources on the same network.
Latency/cross-talk	The delay between when something is said to when the other person hears it.
Volume increase or decrease	This can happen at the beginning or intermittently during a call. For troubleshooting purposes note which it is for the administrator. Most likely the result of a call coming to Amazon Connect through a third-party transfer.
Call disconnects	Disconnects can happen at any point during the call. To help the administrator pinpoint the issue, note when during the call the disconnection happens.
