

Amazon Connect Flows Advanced

Course Summary

Concepts

- **Flow modules** are reusable components that encapsulate flow logic. Use modules for greetings, prompts, call transfers, data validation, error handling, or integration with external systems.
- **Step-by-step Guides** provide agents with custom views, forms, and step-by-step instructions tailored to each interaction. Views are AWS managed or customer managed, which provides for flexible customization.

Benefits

Advanced capabilities of Amazon Connect Flows provide a number of benefits to organizations.

Flow modules

- Promote modular design, code reusability, customization, and more efficient development of contact flows.
- Break down complex flows into smaller, manageable components, to enhance code organization, readability, and maintainability. Modules provide version control and consistent updates across flows.

Step-by-step Guides

- Empower agents with intuitive workflows, tailored views, forms, and step-by-step instructions.
- Streamline customer interactions and guide agents through complex processes, capturing customer information, or providing personalized recommendations.

Considerations

Flow modules

- Identify experiences that use repeatable logic.
- Design and build your modular components once and invoke modules within the main flows.

Step-by-step Guides

- Use existing AWS managed views or create your own custom views.
- Configure guide flows, and display views in the agent workspace to provide guidance.
